

# Target New Efficiencies The Easy Way

**CUT COSTS | CUT CO2 | SAVE TIME**

With the best will in the world, PCs in your Organization are going to get left on and when they do, it's going to cost ... and more than just cash!

PCs can be like a leaking faucet just dripping profits and budgets away sometimes by as much as \$200 or more a Year, for every PC left on.

Our Professional PC Power Management Software, TaskForceCO2, will automate all your power savings from PCs which is guaranteed to reduce your costs and CO2 emissions. At the same time you free up resources for your Technicians and prolong equipment life which all adds up to extra efficiencies.

With a range of additional Power Management features you can let TaskForceCO2 take care of things like Users leaving PCs on overnight and at weekends, just so they don't have to wait for them to power up in the morning and sit back and watch the savings Grow!

Try our  
Waste Estimator  
at
